Chris Ryan has worked for more than 30 years across various areas of science, technology, environmental policy and design. He has worked in projects that span the community sector, business, academia, government and international agencies in Australia and overseas. His extensive work includes Directing the National EcoReDesign program and the Victorian Eco-Innovation Lab. He is joint editor of the UNEP Global Guide to Design for Sustainability (D4S). In 2008-9 he was Chair of the Premiers Design Award in Victoria. His industry work includes projects for Electrolux, Volvo, Fletcher Constructions, Schiavello Systems Furniture and the Transurban group. To date, his work has advocated reducing the environmental impact of existing goods and services. Increasingly, he is also calling on designers to “re-organise systems, to redefine desirable life-styles, to revalue natural and social capital, rethink the satisfaction of human needs and to re-design business and zero-carbon products and services”.
