Experience cutting-edge timber design, digital fabrication and construction at ATDW 2015, a two week learning by making event at the University of Tasmania’s School of Architecture & Design, Launceston.

Working on a ‘live’ project, students will experience traditional and contemporary timber design and construction methodologies, with an emphasis on hybrid techniques utilising digital tools including 3D modelling, CNC processes, and 6-axis KUKA robot fabrication.

The ATDW provides undergraduate and masters level students an opportunity to gain hands-on experience in cutting edge digital timber fabrication techniques for design and construction. The program specifically caters to undergraduate architecture and engineering students, cross-institutional enrolment is encouraged.

Limited places available - REGISTER YOUR INTEREST TODAY!
Cross-Institutional enrolment closes November 21st 2014
